

HIGHLAND PARK WOMEN'S HOSPITAL

WOMEN'S HOSPITAL RENOVATION

CLIENT NorthShore University HealthSystem | **LOCATION** Highland Park, Illinois | **SIZE** 30,000 sf

PROJECT SCOPE

The renovation of the Highland Park Women's Hospital (part of NorthShore University HealthSystem's Highland Park Hospital) took place in four phases, allowing the department to remain operational throughout construction. The project includes a new two-story lobby and entry canopy, 21 patient rooms, an 11-bassinet nursery, and a new, centrally-located surgical suite for C-section deliveries and recovery.

As part of an integrated design process, the new Women's Hospital was planned with great care and thoroughness based on feedback from physicians and nurses and the latest research on labor and delivery departments. Team stations are positioned at several points throughout the department to allow maximum coverage while limiting travel distances for nurses.

The facility was designed based on the "LDRP" concept, where a new mother remains in the same room for labor, delivery, recovery, and post-partum care. Eckenhoff Saunders designed each patient room with the mother's comfort and the staff's optimal workflow at the forefront to accommodate this practice. Room amenities provide support for in-room care and the needs of the family.
