

COMED POWER DISTRIBUTION CENTER

ADDITION TO BULK POWER FACILITY

CLIENT ComEd | **LOCATION** Lombard, Illinois | **SIZE** 1-story, 11,000 sf

PROJECT SCOPE

ComEd commissioned this addition to its 25-year-old bulk power distribution center to accommodate an increased need for programmer and conference space. The single-story, 11,000 sf addition features decorative structured steel columns, horizontal curtain wall mullions, and rooftop air intakes, which serve as metaphors for ComEd's transmission towers and other related electrical equipment. A glass-enclosed thoroughfare wraps around the office areas and brings natural light to the workspace.
