

SKOKIE HOSPITAL - SURGERY EXPANSION

SURGICAL PAVILION EXPANSION

CLIENT Endeavor Health (Owner) and Integrated Facilities Solutions, Inc. (Program Manager) | **LOCATION** Skokie, Illinois

SIZE 76,000 sf

PROJECT SCOPE

The multi-phased implementation of Eckenhoff Saunders' Skokie Hospital masterplan includes approximately 250,000 sf of new space and renovation of about 340,000 sf. As part of the redesign and modernization of the Skokie Hospital campus, the new 76,000 sf surgical pavilion offers the most sophisticated surgical and recovery environment for all patient procedures.

The building includes eight large operating theatres, patient recovery bays, sterile supplies, and surgical staff amenities. It also houses a new outpatient GI lab and conference center conveniently located near the main hospital entrance for easy public access. The pavilion is connected to the existing hospital and the ambulatory care center across the street via a new pedestrian bridge. The architecture of precast concrete and profile metal panels unifies an otherwise disparate grouping of campus buildings. The glass-enclosed bridge facilitates staff and patient movement and provides views and orientation, essential in all hospital planning.
