

CARDIOVASCULAR ICU AT GLENBROOK HOSPITAL

CRITICAL ICU PLANNING AND DESIGN TO IMPROVE PATIENT OUTCOMES

CLIENT Endeavor Health | **LOCATION** Glenview, Illinois | **SIZE** 22,000 sf

PROJECT SCOPE

22,000 square feet of existing patient space was transformed to accommodate the new cardiovascular intensive care unit (ICU) at Glenbrook Hospital in Glenview for Endeavor Health. The new ICU was designed with a focus on creating a patient-centered, healing environment while enhancing the functionality and efficiency for Endeavor healthcare providers. The unit's layout includes spacious, well-equipped patient rooms with calming, natural light and colors, ensuring a comfortable and private setting for critical care. Thoughtfully integrated technology and ample storage solutions support staff in providing attentive, immediate care, with easy access to medical equipment and monitoring systems.

Adjacent workstations allow staff to monitor patients closely, enhancing response times and communication. The design also includes flexible spaces to support a collaborative approach to patient care, with visibility between patient areas and workspaces to optimize oversight without compromising patient privacy.
