

WALGREEN RESEARCH LABORATORY AND RESEARCH BUILDING

INNOVATIVE RESEARCH FACILITY AT EVANSTON HOSPITAL

CLIENT Endeavor Health | **LOCATION** Evanston, Illinois | **SIZE** 6 stories, 71,000 sf

PROJECT SCOPE

Locating this facility on the Evanston Hospital campus allows researchers from the NorthShore Research Institute to have ready access for patients on research studies. Its proximity to the hospital's clinical areas facilitates physicians' access to the most innovative research technology.

The building houses the NorthShore Clinical Trials Center, a hub for the system's research efforts. In addition to a vivarium, an entire floor is dedicated to scientists' wet labs and another houses the Center for Advanced Imaging, a premier MRI research center of international stature. The exterior facade's brick and cast stone are harmonious with the campus. The building shares a lobby with the adjacent Evanston Women's Hospital.
