

KELLOGG CANCER CENTER

FLAGSHIP CANCER CARE CENTER FOR ENDEAVOR HEALTH AT EVANSTON HOSPITAL

CLIENT Endeavor Health | **LOCATION** Evanston, Illinois | **SIZE** 48,000 sf | **SUSTAINABILITY** LEED Silver Certified

PROJECT SCOPE

This facility supports Kellogg's collaborative model of treatment. The key to the design was its integration into Evanston's existing architectural identity. Clinical pods allow for the focused treatment of different types of cancers, along with a variety of treatment room options, patient library, private consultation rooms, green roof, full outpatient pharmacy, and integrated medicine. Eckenhoff Saunders worked with the Oncology Patient Advisory Board to determine what design elements were most important to those undergoing care. The result is an open yet intimate space anchored by a "conservatory" lobby filled with greenery and natural light from extensive skylights.
